

## ACCC® Installation Training<sup>SM</sup>

CTC Global is pleased to announce a revised ACCC Installation Training program. Intended for all new installers of ACCC conductor including linemen, operators, fitters, and supervisors, the revised program focuses on the critical installation elements that ensure efficient and reliable stringing, sagging, termination and commissioning of ACCC conductor.

### **Why the new program?**

World-wide, installations of ACCC conductor continue to expand and improve and include a growing number of new contractors that have not previously experienced ACCC conductor. CTC Global is committed to work with the global installation contractors to ensure reliable and efficient installation of ACCC conductor. This Installation Training Service is designed to deliver best practice information, regarding equipment and methods and to validate trainees' understanding of installation requirements.

### **What does the program include?**

The revised Installation Training Program contains the following:

1. **Classroom Presentation** – Instructor presents a 1- to 2-hour slide deck lecture that presents the basics and principles of the ACCC Installation Guidelines in graphic form. “Do this, don’t do that” in pictures and illustrations. The images have very little text. Instead, an accompanying script facilitates translation. The classroom presentation includes a graphics-only quiz. Each trainee will also receive a hard copy of the Installation Guidelines. The classroom presentation includes a section covering ACCC Maintenance and Repair.
2. **Practical Hardware Assembly** – the class practices actual assembly of deadends and splices from conductor measuring, cutting, and preparation to compression and proper handling techniques.
3. **Equipment Readiness Review** – The Instructor and trainees inspect the critical tooling and equipment available on the jobsite and verify compliance with the Guidelines and Critical Equipment List for the subject conductor size.
4. **OJT** – on the job training. The Instructor stays with his class as they begin the installation. He observes, advises, and provides technical assistance and further instruction for the first few pulls or sections, for up to 7 days. OJT ends when the instructor judges that his class is conducting the installation according to the instructions and techniques of the Installation Guidelines.

Upon conclusion of the OJT, diplomas are awarded to the installation graduates that have adhered to all aspects of the Installation training, and a Training Certificate of Delivery is signed by the client.

The training materials (slide decks, scripts, and quiz) and DVD video of the classroom presentation are freely available to CTC partners. Please request from [FieldService@ctcglobal.com](mailto:FieldService@ctcglobal.com)

### **Who conducts the Training?**

The training is delivered by an ACCC® Certified Master Installer™, with ACCC installation experience in a wide variety of applications, backed by extensive background in high voltage line construction.

### **When will the training be held?**

Anytime and anywhere that an inexperienced installation company or crew is intending to install ACCC conductor. We recommend one training session per crew for large projects.

### **How much does it cost and how do I schedule?**

CTC Global is pleased to include this Service for all new projects and all new customers and EPC or utility installation crews involved with the Installation of ACCC Conductor. Additional or repeat deliveries are USD \$3500 each. Please contact your CTC Global Business Development Representative to order and schedule.
